

AIR TRAFFIC CONTROL & LANDING SYSTEMS (ATCAL) MAINTENANCE

For over 25 years, we have maintained the safety of the National Airspace System (NAS) through stringent maintains of navigational aids (NAVAIDs) used by commercial, Department of Defense (DoD), and civil aviators. Our services to customers include corrosion control, major and minor scheduled and unscheduled maintenance, and preventive maintenance inspections.

EXPERTS: Our technicians are extensively trained and qualified not only on legacy systems but also the latest in navigational equipment and emerging aviation technologies. All employees are licensed by the FCC, and each technician holds a clearance.

SAFETY GUARANTEE: Technicians regularly coordinate with the FAA Flight Inspection Field Office for required flight checks of ATCALs.

INSPECTIONS: Preventive maintenance inspections are an integral part of our overall maintenance management. These inspections ensure that we maintain critical uptime rates well above the established standards for all assigned equipment.

ACCOUNTABILITY: Detailed documentation of equipment maintenance is vital to ensure procedures and technical orders are properly followed. Our management uses the latest in maintenance tracking software to alert the company of negative trends before they become major issues.

OUR SERVICES & EXPERTISE:

- NAVAIDs
- Meteorological/Navigation (METNAV)
- HF, UHF, & VHF radios
- STARS Tower Display Workstation
- Enhanced Terminal Voice Switch
- Weather dissemination systems
- Corrosion control treatment
- Preventive maintenance inspections
- FAA flight check coordination
- Dedicated quality control plan
- 24-hour outage response
- Equipment documentation
- Calibrated test equipment
- Computerized maintenance management system
- Preventive Maintenance Inspections
